SKILLS

- Project Management
- Software Architecture
- Data structures
- System security
- Effective Communication
- Deep Learning
- Programming languages
(python, java)

PROFILE

I'm currently pursuing a **BSc (Hons) in Cyber Security** while actively refining my offensive and defensive security skills through hands-on platforms like **Hack The Box** and **TryHackMe**. I care about the complete lifecycle of secure software: from threat modeling and underlying cryptography to system hardening and resilient architecture.

Beyond security testing, I build full-stack utilities and secure backend logic using **Python** and **Java**, alongside modern web interfaces powered by **Next.js**—aiming to bridge the gap between robust cybersecurity engineering and clean user experiences.

EDUCATION

2025 — PRESENT

SLTC Research University, Sri Lanka

BSc (Hons) in Cyber Security

Curriculum focuses on offensive and defensive security principles, core networking, and foundational software systems. Coursework covers **Network Architecture & Protocols**, **Applied Cryptography**, and **System Administration**. The program emphasizes hands-on threat analysis, secure programming practices, and operating system mechanics.

PROJECTS & WORK

File Encryption Vault

A Python-based utility utilizing symmetric cryptography primitives to secure local directories with a master passkey framework.

Python , Cryptography

Hotel Management System

An application architecture designed to organize administrative shifts, track transaction logs, and manage active states.

Java , Core Logic
